# SlimCool™ Home Filter

## The easy and convenient way to drink more water

The SlimCool™ Home Filtered Watercooler provides you and your family with a constant supply of chilled, filter fresh water at the touch of a button.

SlimCool™ is the first free-standing watercooler designed specifically for the home or a small office, with a range of advanced features and health benefits that make Slimcool™ the must-have appliance.

### Why do I need a SlimCool™ Home Filter?

We all need to drink more water, especially children. SlimCool™ lets you filter normal tap water and chill it at the same time, giving you litres of great tasting cold water anytime you want.

In addition to offering a constant supply of chilled water for a fraction of the cost of bottled water, the SlimCool™ Filter will encourage you and your family to drink more water, which will help to maintain healthy bodies and active minds.

### How does the SlimCool™ Filter work?

Simply fill SlimCool™'s extra large water tank with tap water, which then passes through a Brita MAXTRA™ cartridge filter to remove chlorine, limescale and other impurities.

The water is then stored in Ebac™'s ultra hygienic WaterTrail™ system, at the heart of the cooler, where it is chilled using similar cooling technology to that of a fridge. One finger is then all it takes to activate the dispense lever and enjoy a glass of cool, clean and clear water.

### Key Benefits

**Maintain a Healthy Lifestyle for Less** — Drinking plenty of water is a great way of helping your family stay fit and healthy. It is essential for our wellbeing that we drink the recommended 8 glasses of water each day - SlimCool™ is the most convenient and economical way to ensure a constant supply of chilled, great-tasting water, saving money and time by eliminating costly bottled water purchases.

**Save Fridge Space** — SlimCool™ eliminates the need for bulky bottles of water in the fridge & frees up space for milk, juice or your favourite tipple.

**Slim but Stable** — with a footprint of just 30cm and a body diameter of 20cm, the SlimCool fits easily into the kitchen or any other room you choose. The base is weighted to ensure maximum stability.

**Brita Filter Technology** — To ensure the best possible performance Ebac has teamed up with BRITA, the water filtration experts. The SlimCool™ uses BRITA's best performing MAXTRA™ cartridge filter. MAXTRA™ is the forefront of filtration technology, delivering 20% improved limescale reduction with a 4 step filtration process. The result is great tasting, clean and clear water that you will love.

**Hygiene Made Easy** — SlimCool™ is equipped with Ebac's patented WaterTrail™ technology to offer maximum hygiene. Instead of using timely sanitisation methods such as chemicals, the WaterTrail™ (and all parts that come into contact with drinking water), are simply replaced every 6 months. The water tank can simply be washed in warm soapy water or even in a dishwasher.

“

We've been using an Ebac SlimCool Filter since last summer and we soon found that the whole family was drinking chilled water rather than fizzy drinks. We've saved money, not to mention space as our fridge is no longer full of water bottles.

”

The Clayton family from Crawley

## Electronic Day Counter

A visual display helps to ensure optimum filtration by counting down the days until the next Brita Maxtra filter needs to be changed.

## Large Water Tank

A total capacity of 7 litres is much greater than any filter jug so you are likely to only fill your SlimCool™ once a day. Because 2.2 litres of water is refrigerated inside the cooler, as long as you keep the top tank re-filled, you will always have a constant supply of chilled water.

## Dispense Levers

One finger is all it takes to dispense a cool refreshing glass of water. There are two levers — one for chilled and one for ambient water, or press both together for a perfect mix.

## Dispense Nozzle

For peace of mind and maximum hygiene, the SlimCool™ Filter's dispense nozzle is covered with a protective layer to prevent fingers touching the actual dispense point of drinking water.

## Adjustable Cup Station

Securely holds your cup or glass at the ideal height allowing one finger operation of the dispense lever. The cup station can be adjusted to accommodate larger containers like jugs for sports bottles.

## Retractable Cable

No unruly, messy wires that could cause accidents. Excess cable is stored neatly inside the base.

## Slim & Stylish

With its stylish design, a choice of modern colours and a compact diameter of just 20cm, the SlimCool™ Home Filtered Watercooler will look great in the kitchen or any other room you choose.

## Product Colours:

The SlimCool™ Home Filtered Watercooler is available in a range of 4 contemporary colours to compliment any room setting. A choice of removable side panels are available in Silver, Beech, Charcoal and Cream decors to complement either a cream or charcoal chassis.

Cream Body with Beech Side Panels
